This summer program offers an intensive two-week course in the interface between disciplines concerned with design of the built environment and scientific disciplines concerned with human perception and behavior. Grounded in the local landscape of Galicia and northern Portugal, the course is open to architecture and design professionals, including architects, urban designers, historians, environmental experts, health professionals, interior and product designers, cognitive scientists, landscape architects, sociologists, anthropologists and neuroscientists, as well as graduate and postdoctoral students in these disciplines.

Designed by Ernani Aita Barea
